Making a rectangle with a square framelit

Line up the framelit on your paper so one end of the framelit and the paper are off the platform. You only want to cut three sides of the square. Run it through the Big Shot.

Rotate your paper and carefully line up the framelit with the cuts of the first run. Make sure that one end of the framelit and paper are off the platform, so it doesn't cut a line down the middle of your rectangle. Then run it through the Big Shot. Enjoy!
